Imaging neurophysiology of human sexuality using Positron Emission Tomography

1. High levels of alertness and fear don't go together with sexual behavior. (*Chapter 2*)
2. High sexual arousal involves de-activation of primary and secondary visual cortex. (*Chapter 3*)
3. The pituitary gland plays an important role in basic survival mechanisms. (*Chapter 4*)
4. The pontine nuclei POSC and PFSC may act as the final output to the spinal cord. (*Chapter 5*)
5. Vision is our dominant sense. (*Chapter 6*)
6. Language of love is in your eyes. (*Phineas Fletcher*)
7. The difference between sex and love is that sex relieves tension and love causes it. (*Woody Allen*)
8. Sex is an emotion in motion. (*Mae West*)
9. We are all born sexual creatures, thank God, but it's a pity so many people despise and crush this natural gift. (*Marilyn Monroe*)
10. Men marry women with the hope they will never change. Women marry men with the hope they will change. Invariably they are both disappointed. (*Albert Einstein*)
11. Một nụ cười bằng mười thang thuốc bổ - A smile is equal to ten medicines. (*Vietnamese idiom*)
